PRODUCING WELLS

Since the bringing in of Royalite No. 4, the "wonder well" of Turner Valley, which has been producing steadily since 1923, when it was brought into production with a flow of 7,000,000 cubic feet, averaging 536 barrels per day. Okalta No. 1 the next big producer gave 500 barrels; Home No. 1 with 800, and Calmont, the Valley's largest producer, with over 800 bbls.

Facts About Turner Valley

TURNER VALLEY located 35 miles southwest of Calgary, the best oil field in the Dominion, now has over 100 wells, about 40 of which are producing. Tests have proved that the limestone formations saturated with oil (wet gas) underlie the surface from the Model well in the north end to the Merland in the south, a distance of 15 miles, and we look forward to seeing thousands more in the not distant future.

Where the revenue from oil amounted to five million dollars in 1929, who knows to what extent it will increase with the development of the next few years?

The valley now has a population of 5,000, and there is plenty of room for thousands more. Turner Valley averaging a population of over 2,000, while the Village of Black Diamond, averages about 600; Naptha, 200, and the Hamlet of Hartell in the south end with around 350 of a population.

During the summer months of last year the payroll was \$100,000.00 monthly, for the residents and business places in Turner Valley. There are nearly 100 places of business within the valley, 17 school rooms with an attendance of 560 pupils. United Church, Royal Bank, Garages, Drug Stores, General Stores, Hardware, and the town even boasts of a weekly newspaper,

Tremendous progress has been made from the days when the old timers skimmed the ponds for axle grease, to the modern three million dollar plant and pipe line, which puts the valley's production at the service of the public. This is not all, erection is starting immediately on another absorption plant to cost in the neighborhood of \$300,000.00 and this plant will service the McLeod Oils and the Okalta Oils.

Over 200 million cubic feet of waste gas or 2,000 barrels of gasoline is burned up daily. This alone, if utilized, would provide power, light and heat for a large number of cities within our Dominion.
